SANS Internet Scanner Description: SANS Internet Scanner is a free and easy to use tool for scanning websites and detecting possible security threats. It checks your website against a database of several thousand known vulnerabilities, evaluates the risk of your website and warns you about possible security risks. SANS Internet Scanner can scan as many websites and as many files as you want. If you receive a warning about a website, you can test this website with a free scan. In case you want to test your own website or file, you can use our own free web server. SANS Internet Scanner has a built in web server to check whether there are files or errors in your website. SANS Internet Scanner is also integrated in the SE-Firewall project that was created by SE-Systems. The project allows you to scan websites and files from a mobile device. Se-Firewall gives you the possibility to scan a range of websites, pre-defined websites or from a file. In addition you can perform a basic check of your email accounts to find out whether your e-mail accounts are vulnerable to known spam attacks. SANS Internet Scanner is a great tool for securing your company against cyber attacks and for regularly checking websites and files to find out any security risks. * It reads your hostname from a file using a registry key and converts it to a MAC address in an easy-to-use GUI. * This registry key is saved in the same subdirectory as the executable file and it can be copied to another computer for easy use. * It is fully automatic (you don't have to press a button or type a command). * It reads the file path from the hostname registry key. * It uses a standard OpenNETCF.NET project to create the executable file (the project must be in your local.NET C:\Users\\Documents\Visual Studio 2008\Projects\WindowsFormsApplication1\WindowsFormsApplication1\bin\Debug folder) * It will need a button to save the converted MAC address. How to use: * Just double-click the executable and select the.txt or.reg file you want it to read. * The output will appear in a new textbox in the same window. * You can also double-click the.txt or.reg file you want to read and the tool will open the file to read it. * To get the MAC address, just open the.txt or.reg file in a text editor and it will display the MAC address. * You can also copy the MAC address from the text editor. * You can also add more MAC addresses to the list of available MAC addresses by simply editing the.txt or.reg file. * Finally, you can copy the MAC addresses to the clipboard. KeyMACRO Version History: Version 1.0 - Created on Oct 26, 2007 Version 2.0 - Added MAC addresses in the registry key Version 2.1 - Added MAC addresses in the registry key Version 2.2 - Added MAC

addresses in the registry key Version 2.3 - Fixed MAC addresses in the.txt or.reg file Version 2.4 - Changed the.txt or.reg file
Version 2.5 - Now I can read the.reg file with the button (and some other fixes) KeyMACRO Copyright: * KEYMACRO is
