how to install and use the bullet angel xshot hack bullet angel xshot hacked How To Install Bullet Angel Hack Ios How To Install Bullet Angel Hack Android How To Install Bullet Angel Hack PC Category:2008 video games Category:Android (operating system) games Category:IOS games Category:Windows games Category:Xbox 360 Live Arcade games Category:Counter-Strike: Source Category:Video games developed in SpainQ: Creating a master record I have a requirements to build a master record. I have googled about this and I have found the below sample:- INSERT INTO [table] SELECT [.] FROM [table] Now this seems to work, but I am not sure why? I am not sure what the [and] means? Can someone please clarify? Thanks A: The [] brackets represent a list of parameters which is meant to be binded to your query. You can read more about it here. You can use a comma to separate multiple parameters. [.] means "the list of (.) followed by the list of (.)". If you remove one of the commas, you get something like "list-of-lists-of-parameters" which is not allowed. Q: Inserting values into multiple tables using Core Data I have a viewController with a button that adds a new entry to a core data store. I'd like this new entry to be inserted into two core data stores, two different entities. I'm unsure of how to accomplish this and was wondering if anyone had any advice? Here is the code: - (IBAction)AddNewThing { NSManagedObjectContext *mainContext = (NSManagedObjectContext *)self.managedObjectContext; NSManagedObjectContext *managedObjectContext = [[NSManagedObjectContext alloc] initWithEntity:@"Thing"]; NSString *something = @"a string"; // Create a new row in the navigation controller's table NSMutableArray *navTableItems = [[NSMutableArray alloc] initWithObjects:@"first row", @"second row", @"third row", nil]; NSArray *navTableItemsArray
