Category:Audiovisual software Category:Companies established in 1993 Category:Free audio software Category:DSP software Category:Digital audio editorsI bought the U$90 version for my iPad - it works great with the new remote! Sturdy and easy to use. The one I bought has a gummy joystick head that will cause

some gliding off the track if used too aggressively; I used it to control a collage of my grand children's drawings that I used for a gift. The idea is to put the drawings on a canvas with a velcro backing. There is a slot in the canvas for the joystick to slide in and out to turn the canvas left and right. I highly recommend this product! I own a two-motor kit (Rikon RC3260) and it works well with the AutoRemote, but it works better than the RemoteLink. It will consistently match the inputs from the kit to the remote control. Also, it has a dedicated button to indicate the current position of each motor shaft. The AutoRemote lacks this function. The AutoRemote also has a longer range than the kit. I like the fact that the AutoRemote also has an ability to turn off motors while it is receiving input. I

am pleased with this (AutoRemote version). I downloaded and installed it using the TR 1.2 compatibility as the instructions suggested. I bought this to control my EasyReach DS4200Lavender and it works great. It is easy to use. I have also tried it with my Handy Servo and it works great as well. I do wish it had better instructions on how to set it up but I figured it out with the help of a friend. It is a little bulky, but I think it worth the price. When i connected my EasyReach DS4200Lavender to it, it just did ba244e880a
