The association's national office, established in 2010, is in Frankfurt am Main. The German Aerospace Centre (DLR) is a founding member of the association. Description The association's goal is to "achieve, promote and promote the development of information and communication technologies (ICT) and information technologies in connection with space flight and space research and education". Its activities include the formation of the German satellite community and forum for space applications, a non-profit organisation and a public policy coordination centre, and the organising of conferences and seminars on the subjects mentioned above. Furthermore, the association is a member of the Space Policy Coordination Unit of the German Federal Foreign Office. History The association was founded in 2000 as an umbrella organisation to support and enable the use of satellite technology for public purposes.
