Jul 6, 2020 How to download Flubber Y El Profesor Chiflado[DVDRIP][Spanish] Mar 23, 2021 . /file/420076/giladevi.pdf The media files you download with celomusic.com must be time-delayed. Q: Turning a static block into a variable in another static block

I am a bit confused on how I can get my java program to accept a variable. Here is what I am trying to do: `public static void main(String[] args) { //System.out.println(getMinMax(5,8)); int a = getMinMax(5,8); //System.out.println(a); } public static int getMinMax(int min, int max) { //System.out.println(min); //System.out.println(max); int min = min; int max = max; return (min, max); }` I want the output to be 5 and 8, but I am getting an error of "int expected" under the "int" of the return statement. A: You are expecting the return type of `getMinMax()` method to be `int`. It is not returning `int`, it is returning an object of type `(int, int)` You need to write the `getMinMax()` method like this. `public static (int, int) getMinMax(int min, int max) { //System.out.println(min); //System.out.println(max); int min = min; int max = max; return (min, max); }` And then use it like this `public static void main(String[] args) { //System.out.println(getMinMax(5,8)); int a = getMinMax(5,8); //System.out.println(a); System.out.println(a.getFirst()); System.out.println(a.getSecond()); }` The Conservative
