many commercial CAD programs use the format. Originally, the drawing exchange format only supported flat drawings. The format was extended in 2010 to be able to export the native CAD file structure from the most recent versions of AutoCAD. AutoCAD supports many native tools including and drawing toolbars that facilitate common processes: Numeric data input (like in Excel): Drag and drop to add formulas in graphically. Vector data input (like in Excel): Drag and drop to add or insert points, lines and arcs (vector data points). Measure and dimension tools: Inline editing of dimensions (bars and bezier). Measure and dimensioning tools for editing of both plans and drawings. Layer editing: Drag and drop to move, copy, delete and select layers (like in PowerPoint). Numeric (double precision floating point) data output: Drag and drop to output cells, text fields, shapes, lines, and points. Text: Drag and drop to add text, edit and output text. Data exchange AutoCAD data exchange formats

AutoCAD data exchange formats: Drawing Exchange Format (DXF), a structured, line and block format. Electrical (EDF), a non-structured, B-Rep model format for Civil 3D (ADT), a native model format. Architecture (ADP), for architecture drawings. AutoCAD data exchange formats: DWG DGN (older format) IGES STL (specifies line and block elements) STEP Importing AutoCAD files A number of import methods: Other formats: SIA (Structured Information Architecture) NISA (Native Information Storage Architecture) Appending graphics: File formats: CFD (cubic form) CFD (semi-cubic form) CGNS DICOM JPEG Structured Graphics Interchange Format (SGIF) is used to exchange structured graphics. AutoCAD also allows exchanging of graphics as a'mosaic' or 'bumpmap' image by using the DXF Attribute Exchange Format. Imported drawings AutoCAD imports drawings from the above formats and structures them into a file format that the system can interpret. Exported AutoCAD drawings AutoCAD exports files in all formats listed above in different ways 5b5f913d15
