****ONLINE RESOURCES**** You can find out everything you ever wanted to know about Photoshop with these useful resources: ****Adobe.com:**** Get started with Photoshop, and then visit the website for more tutorials, tips, and articles. At the time of this writing, the site was running best in Internet Explorer or Firefox, but some functionality was broken in Safari. ****tutorialsonline.com:**** The site has several tutorials and tips for working with Photoshop CS2. ****usabilityplanet.com:**** You can find more helpful Photoshop tutorials and other Photoshop-related resources, including a short version of this book. Photoshop's history dates back to the beginning of digital imaging, when early developers worked with the older CRT (cathode ray tube) monitors, which, sadly, were also much too expensive and difficult to work with. Nowadays, Photoshop is used primarily for creating images, though it's still valuable for adding and subtracting color and manipulating edges. In addition to editing and manipulating images, Photoshop also offers a huge selection of features for retouching and correcting images. The following sections discuss some of Photoshop's more important features. ****Photoshop CS2 features a completely new interface and many new tools.**** In fact, nothing in this book will be as useful to you as what's new in Photoshop CS2. (It's worth downloading the latest version, though, as new features are still being added.)

Menu Our Outlier Coffee Lodge in Peru The main draw to this group trip was to be able to visit the world-renowned coffee farm, Wabi Sabi, in Arequipa, Peru, at the foot of the Andes Mountains. We were not disappointed! The four of us were picked up in Lima at the end of a long flight from Melbourne, and then taken to the Arequipa airport for another flight in a smaller plane to the farm. Our guide Jorge, an incredibly knowledgeable local person, took us through a scenic journey to Wabi Sabi, which is located halfway between the cities of Arequipa and Puno. As it is on the side of a hill, the farm has a magnificent view of the valley below. A small road leads to the property, and then a steep ramp takes visitors up to the farm. Jorge led us through acres of fields of coffee plants, and we saw dozens of different plants and beans of all colours. On the coffee plantation, we walked between rows of beans, and could see the leaves curling and twisting around the beans to give them a warm glow. The huge open spaces of the farm are surrounded by grazing llamas and cows. We stood, squinting into the sun, marveling at the view, when we heard a voice telling us to stop and look below. There, among the dark trees and steep cliffs, was a small, lonely structure – a meditation hut. We made our way along the path towards the hut, and Jorge invited us to sit down on a small platform nearby. Sitting there, with the waves of mountains rolling down to our view, it became even more clear why this place, with its meditative atmosphere, was so special. We all felt calm and relaxed and peaceful.

are small, non-lens-based distance measurement devices. For example, barometric sensors are attached to a vehicle and are used to measure distance from the vehicle to the bumper of an immovable object. In another example, ultrasonic sensors are attached to a vehicle and are used to measure distance from the vehicle to the curb. Still other distance measuring systems measure distance from the vehicle to the ground. To date, single device lane departure detection systems have not utilized accelerometers to provide feedback related to roll.
